THE ANSWER LIES IN THE QUESTIONS

| Choose between 32-bit or 64-bit	Improved Graphics	X/Y and Z Scatter Diagram	Improved Y/N/A Template	Easier and Improved Navigation	Select from more than 10 Options	Candidate or Delegate Voting Slide	Improved Moderated Texting	Merge Multiple Sessions	Improved Reports

Yes/No/Abstain Slide with Rules

The YNA Slide has been improved to support Rules for automatic validations on Resolutions asked.
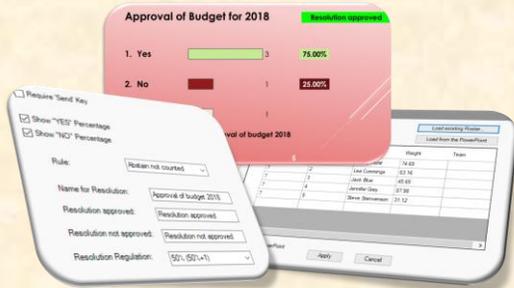

The Question Properties have been amended to enable rules to be set to fit with your bylaws or legal regulations. For example, Abstain can automatically be counted as Yes, No, or set to be not included in the count. For the majority rules, these can be set to standard values such as 50%+1, 2/3, 70%, 3/4 or set to the applicable percentage that apply to your own rules for passing a resolution.

Scatter Diagram: X/Y Graph or X/Y/Z Bubble Chart

Instant visual rating/plotting of 2 or 3 criteria to aid risk assessment or decision making.
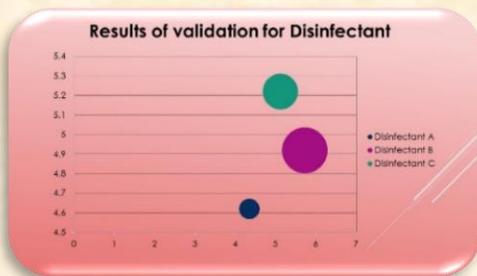

This new Scatter Diagram template is designed to rate a number of products/items on up to 3 criteria's. The results of the first 2 criteria's will be shown on an X/Y Axis. If a third (Z) criteria has been used, the bubble size will reflect the average of the (Z) value.

Candidate Election Slide/Selection from More than 10 Options

Pose a question with more than 10 answer options or conduct a candidate election with ease.

With EdiVote® 2.0, the user now has the ability to vote on more than 10 answer options. The Candidate Election slide allows the user to select one or more names (candidate or delegate election), or items (single or multiple selection) from the list. The list items can be imported from a text file where each line represents a new item. This list can be automatically sorted to identify the item with the most votes.
