

POLLER 2.0™

POWERED BY PUSHONE

...allows participants to interact with your PowerPoint™ presentation, using their Smartphone, PC or Mac computer, iPad™, iPod Touch, Kindle, or any browser-based device to answer multiple-choice questions.

Simply have them log on to www.joinp1.com, enter a unique meeting ID for your event and they are ready to respond to questions as you present.

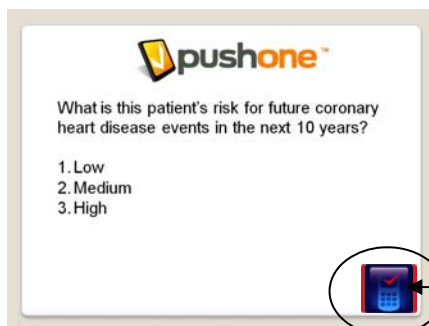

No special download required!

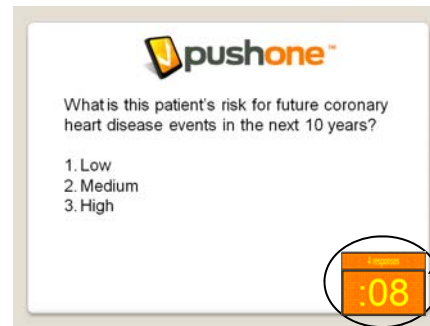

Poller 2.0 software is the easiest way ever to add audience response into your slideshows. Poller's unique **Content Analysis™** feature automatically recognizes any PowerPoint slide that contains a question created in standard enumerated text slide format. These slides are equipped with a Poller Trigger that you can choose to start audience polling...and instantly display a graph at the end of the polling clock. If it is truly NOT a polling slide, just ignore the trigger and move on with your presentation as normal.

How do I use POLLER 2.0? Five easy steps:

1. Install the Poller 2.0 software and connect your computer to the Internet before running the Poller application. Enter the Meeting ID and moderator password provided
2. Using PushOne, open your PowerPoint presentation and click the 'Start Slideshow' button
3. Instruct participants using any browser based input device, browse to www.joinp1.com and enter the Meeting ID. Touch the Vote tab. Questions display when polled for response.
4. Control your slideshow as you would normally
5. When you reach a slide containing a question, just click the Poller Trigger  on the screen to start audience polling. **Is this easy or what?**

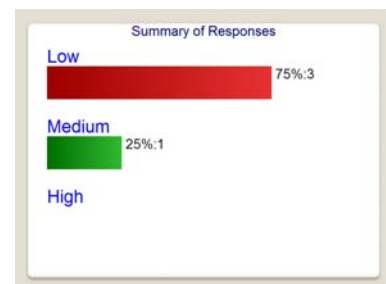

Polling Trigger

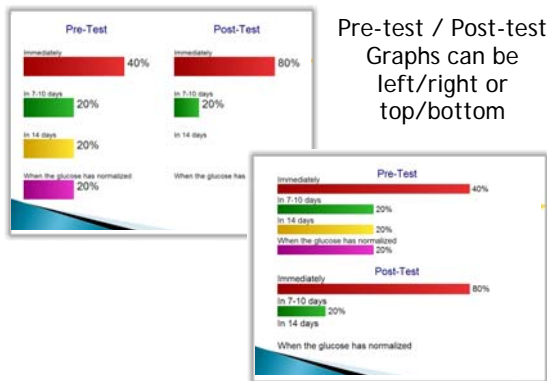

Polling Clock with Music and tally of responses

Immediately following the poll, a graph displays the audience responses using the PowerPoint Master Slide Background or background you've selected, labeled with the text from the question's enumerated choices. You can also choose to delay showing the graph until a later time for reporting only.

There is no need to modify your slides or set the number of choices — Poller handles it for you. All you need to do is run Poller, select your presentation file, check the preview in options for appropriate color scheme and go! The Poller Control Property in PowerPoint allow for advanced applications such as comparison graphs, team or individual competition. For gaming and scoring, correct answers with point values need to be identified. When using comparative graphs, simply indicate the slide for comparison with a simple copy and paste of the “Slide ID” for comparison and immediate pre-post results display.

Your polled response data is saved right in the slide, and gives you the option of exporting it to MS-Office™ EXCEL or HTML document formats when you select to capture jpeg images of questions and graphs.

Pre-test / Post-test
Graphs can be
left/right or
top/bottom

What's required:

- Each Participant with a browser-based device who can communicate with www.joinp1.com through their phone service or WiFi connection.
- Windows XP or higher computer with PowerPoint 2003 or higher. Security set to allow active x controls
- Full administrative rights for installation
- Windows 7 requires User Account Control to be turned off for install and Poller subdirectory to be included in the Trusted Locations for appropriate operation.
- Internet connection for the presenter/moderator **only with open communication on port 3306** to properly communicate with our database on the server.
- PowerPoint needs to use enumerated list (automatic numbering) for multiple-choice questions.
- MS-Excel for reporting of summary or individual data to spreadsheet.
- Any additional ancillary items (Video projection, AC power strip/cord, video cables, etc).

System includes:

- Poller 2.0 Software
- Meeting ID & Password
- Instructions on installation and operation
- Speaker's Guide
- Telephone, web and e-mail support
- One Time Event and Monthly Subscription licenses are available.
